## RESEARCH PROJECTS

*StreamStore* 2020 - present  
<https://streamstore-project.eu>  
Funded by the Hellenic Foundation for Research and Innovation (HFRI) (Grant ID: HFRI-FM17-1998)  
The project aims to fully support highly elastic, scalable, and fault-tolerant stateful stream-processing systems, through the evolution of the elasticity, predictability, and availability of scalable data store technology beyond the state of the art.

*Evovle* 2019 - present  
<https://www.evolve-h2020.eu>  
Funded by the European Union (GA No. 825061)  
The project aims to merge High-performance computing (HPC), Cloud and Big Data in a large-scale testbed applied in 7 domains, from mobility to agriculture to urban planning.  
My work focuses on the design of microservices to support streaming analytics to support continuous data processing using state of the art frameworks, specially optimized to take advantage of HPC resources.

*PaaSage*

2012 - 2016

<http://www.paasage.eu>

Funded by the European Union (GA No. 317715)

PaaSage is a development and deployment platform, with an accompanying methodology and language, with which developers of enterprise systems can access services of cloud platforms in a technology neutral approach that abstracts the technical details while guiding them to configure their applications for best performance.

I designed and implemented a framework for evaluating distributed application deployments in multi-Cloud platforms. I was involved to the design of the Metadata Database containing historical data from past application executions. I was also responsible for the deployment and maintenance of the database backend of the social network developed within the project.
